

JOHN H. CLARK
PANGUITCH, UTAH

December 18, 1928.

State Engineer,
State Capitol Bldg.,
Salt Lake City, Utah.

Dear Sir,

The various canal companies at Boulder, Utah, desire to form an association of water users for the purpose of conducting their affairs through a single board of directors and have one water master. I have no definite data on such matters in my office and am, therefore, asking your assistance. You, very likely, have a set of articles of agreement such as your office approves of.

The main idea behind this organization is to secure a series of uniform water measurements of the various streams and thus be able to apportion the water with a fair degree of correctness. It also involves the appropriation of all surplus water by the association, including storage. The association would then issue water certificates against this surplus and storage water for the benefit of those desiring to take up additional lands and of those new settlers who could acquire water in no other way.

They have already accepted the idea of having you clarify existing conditions and set the duty of water instead of going to court as they were intending. With a little encouragement they will install all of the necessary devices and maintain records which will allow of your office entering a final decree of allotment with the minimum of fuss and expense.

Respectfully yours,

JOHN H. CLARK
